MSCI World Equity Index

Portfolio objective

The portfolio's objective is to generate capital appreciation by using a specialist multi-manager, multi-style investment process. This portfolio is a feeder fund. The portfolio will invest in a single portfolio of a collective investment scheme or another similar scheme with investment policies which are characterised of being of an equity nature.

Investment policy summary

The portfolio will, apart from cash, consist solely of participatory interests in a single portfolio of a collective investment schemes or other similar scheme, operated primarily in territories outside South Africa with a regulatory environment which is to the satisfaction of the Manager and the Trustee of a sufficient standard, to provide investor protection at least equivalent to that in South Africa. The portfolio will mainly be exposed to global developed equity markets but can at times have exposure to emerging markets. There are no additional mandate investment limitations.

Expected number of asset manager/s

This fund invests into the Strategic Global Equity Fund.

Other expenses	0.01%
Total Expense Ratio (TER)¹	1.29%
Transaction Costs (TC)²	0.00%
Total Investment Charges (TER + TC)³	1.29%

Income distribution (cent per unit)

Date	Interest	Dividend
September 2024	0.0900	0.0000
March 2024	0.2100	0.0000

Disclosures

- Total expense ratio (TER):** The percentage of the value of the portfolio that was incurred as expenses relating to the administration (charges, levies and fees) of the portfolio. TER is calculated over a rolling three-year period (or since inception, where applicable) and annualised to the most recent calendar quarter. A higher TER does not necessarily imply a good return. The current TER may not necessarily be an accurate indication of future TERs.
- Transaction costs (TC):** The percentage of the value of the portfolio that was incurred as costs relating to the buying and selling of the assets underlying the portfolio. Transaction costs are a necessary cost in administering the portfolio and impacts portfolio returns. It should not be considered in isolation, as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Calculations are based on actual data where possible and best estimates where actual data is not available.
- Total investment charge (TIC):** The percentage of the portfolio that was incurred as costs relating to the investment of the portfolio. It is the sum of the TER and TC.
- Our management fee has decreased by 1.2% for the Investment Solutions Global Equity Feeder Fund Class A. Therefore, our expectation is that the TER will decrease.

Inception date note

*The portfolio inception date is 23 August 2002.

Risks (portfolio specific)

Derivatives: There is no assurance that a portfolio's use of a derivative strategy will succeed. A portfolio's management may employ a sophisticated risk management process, to oversee and manage derivative exposures within a portfolio, but the use of derivative instruments may involve risks different from, and, in certain cases, greater than, the risks presented by the securities from which they are derived.

Exposure to foreign securities: Foreign securities within portfolios may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Investors are reminded that an investment in a currency other than their own may expose them to a foreign exchange risk.

Feeder funds: A feeder fund is a portfolio that invests in a single portfolio of a collective investment scheme, which levies its own charges and which could result in a higher fee structure for the feeder fund.

Drawdown: The potential magnitude of loss - the largest peak-to-trough decline in returns over the period, also known as the maximum drawdown.

Liquidity: The risk that a given security or asset cannot be traded quickly enough in the market to prevent a loss (or make the required profit).

Equities: The value of equities may vary according to company profits and future prospects, as well as more general market factors. In the event of a company default, the owners of their equity rank last in terms of any financial payment from that company.

For a detailed description of these risks, and other risks that are relevant to the portfolio, please refer to the CIS Risk Disclosure Document, available on the website https://myapi.alexanderforbes.co.za/content/download/afinvestments/investmentsolutionspdfsfiles?path=CIS_RiskDisclosure.pdf

General

Collective Investment Schemes (unit trusts) are generally medium to long-term investments. The value of participatory interests (units) or the investment may go down as well as up. Past performance is not necessarily a guide to future performance. Collective investment schemes are traded at ruling prices and can engage in borrowing and scrip lending (i.e. borrowing and lending of assets). The manager does not provide any guarantee, either with respect to the capital or the return of a portfolio. Different classes of participatory interests apply to these portfolios and are subject to different fees and charges. A schedule of all fees and charges, inclusive of VAT and maximum commissions, is available on request from us or from your financial adviser. Forward pricing is used. Any forecast and/or commentary in this document are not guaranteed to occur.

Redemptions

The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. The ability of the portfolio to repurchase, is dependent upon the liquidity of the securities and cash of the portfolio. A manager may suspend repurchases for a period, subject to regulatory approval, to await liquidity, and the manager must keep the investors informed about these circumstances.

Prices

The latest prices and TER are published daily in the Business Report (South Africa's National Financial Daily) and are made available on our website

<https://investdata.alexforbes.com/for-you/daily-unit-prices>

Performance fees

Performance fees are not levied on the portfolio.

Performance returns

Lump-sum performance returns are being quoted. Income distributions, prior to deduction of applicable taxes, are included in the performance calculations. NAV to NAV figures have been used for the performance calculations, as calculated by the Manager at the valuation point defined in the deed, over all reporting periods. Investment performance calculations are available for verification upon request by any person. Reinvestment of income is calculated on the actual amount distributed per participatory interest, using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. The performance is calculated for the fee class. The individual investor performance may differ, as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. The rate of return is calculated on a total return basis, and the following elements may involve a reduction of the investor's capital: interest rates, economic outlook, inflation, deflation, economic and political shocks or changes in economic policy. Annualised returns are period returns re-scaled to a period of one year. This allows investors to compare returns of different assets that they have owned for different lengths of time. All period returns greater than one year have been annualised. Returns for periods less than one year have not been annualised. A cumulative return is the aggregate amount an investment has gained or lost over time, independent of the period of time involved. Actual annual figures are available to the investor on request.

Valuations and transaction cut-off times

The portfolio is valued daily, at the end of the day (18:00). The withdrawal instruction must be received before 13:00 on the pricing date, failing which, the next pricing date will apply.
